

Your inquiry concerning the use of PCB in Endress+Hauser products

Dear valued customer

Thank you for your inquiry regarding PCB in Endress+Hauser products. **Polychlorinated biphenyl (PCB)**, an organic chlorine compound was once widely deployed as dielectric and coolant fluid in electrical devices.

However PCB is harmful to the environment toxic and classified as a persistent organic pollutant. As a consequence PCB is banned in most countries since many years.

Endress+Hauser doesn't use any PCB in any of their products and hence we can assure you that all our products are free of PCB.

We trust that this letter will answer your questions. Should you require any further information, please contact your local Endress+Hauser Sales Office (see www.endress.com for contact information).

With kind regards

Endress+Hauser Services AG
